

## Overview

The HCS rental combined IWOCS package is a compact system with inbuilt hose reel. This allows customers to have a single lift unit onto and off the installation, helping to reduce overall footprint and the risk of damage to deck hoses.

The combined IWOCS unit is an ideal system for the smaller functionality requirements in water depths up to 200m. The system is a proven package that can vary in functionality from operating a hot stab to operating a xmas tree during installation, intervention or abandonment.

## Weight & Dimensions

**Maximum Gross Weight:**  
15,000 kg
